Education

Bachelor of Science in Cyber Security (BS Cyber Security)

University of Central Punjab (UCP)

2026 – 2030 | Lahore

Expected

Intermediate in Computer Science (ICS - Physics)

Punjab Group of Colleges (PGC)

2026 | Lahore

Completed

Technical Skills

Programming Languages

Python, JavaScript, SQL, Bash

Frameworks & Backend

FastAPI, REST APIs, Three.js, Node.js basics, HTML5, CSS3, Bootstrap

AI & LLM Tools

OpenAI API, Gemini API, Groq API, Claude, Ollama, Prompt Engineering, LLM Agent Workflows

DevOps, Cloud & Systems

Docker, Git, GitHub Actions (CI/CD), Microsoft Azure, Linux (Ubuntu, Kali Linux), System Hardening, Network Fundamentals

Databases & Storage

SQLite, LocalStorage, SQL Database Objects

Certifications & Honors

Grade 2A Qualification

2026

Alibaba Cloud AI Hackathon Pakistan

Global Top 20% Ranker

2026

International Research Olympiad (IRO)

Microsoft Applied Skills Credential: Cloud Security & Monitoring Tasks

Foundations of Cybersecurity

Google / Coursera

Deloitte Cybersecurity Job Simulation

Network Defense & System Security

Practical Cybersecurity Training

Ideoversity, Arfa Software Technology Park

Experience & Leadership

Microsoft Learn Student Ambassador (MLSA)

Technical Ambassador & Contributor

- Guided peer developers through Microsoft Azure cloud modules, security governance, and compliance pathways.
- Published structured technical documentation and practical walk-throughs focused on cloud computing and secure architectures.

Local Enterprises & Global Channels

Digital Transformation & Growth Specialist

- Partnered with local retail and F&B businesses to deploy automated customer feedback pipelines and lead capture systems via Tally.so webhooks.
- Scaled international digital media channels past 230,000+ organic impressions within seven days through targeted metadata optimization and audience retention funnels.

Professional Summary

Software developer and cybersecurity student with hands-on experience in Python automation, REST APIs, web development, and Linux systems. Built practical AI-powered workflows, WhatsApp business bots, and full-stack web applications using FastAPI, Docker, and LLM APIs. Focused on shipping clean code, containerizing applications, and applying practical security practices.

Projects

LocalBiz AI WhatsApp Agent

- Engineered an open-source conversational business assistant utilizing FastAPI, Docker, and the Meta WhatsApp Cloud API.
- Integrated Groq and Google Gemini models for ultra-low latency response generation and intelligent intent handling.

Interactive 3D Restaurant Web Application (Labaik Broast)

- Developed a responsive 3D web platform using Three.js and vanilla JavaScript to render dynamic 3D table reservation setups.
- Designed responsive UI components and lightweight RESTful endpoints to streamline interactive ordering workflows.

RetailFlow-POS (Offline-First POS & Inventory System)

- Architected an open-source, offline-first Point of Sale and inventory management application using vanilla JavaScript and HTML5.
- Implemented dynamic LocalStorage data structures for real-time stock tracking, automated invoice generation, and receipt printing.
