📄 PROFESSIONAL SUMMARY

Cybersecurity student and Python developer focused on building secure, functional systems. Experienced in writing automation scripts, developing FastAPI backends, and containerizing apps with Docker on Linux. Built practical tools like an AI WhatsApp receptionist and an offline POS dashboard, leveraging LLMs to accelerate development while prioritizing endpoint security.

🧠 TECHNICAL SKILLS

Programming Languages

Python, JavaScript, SQL, Bash

AI & LLM Tools

● ● ● ● ●
OpenAI API, Gemini API, Groq API, Claude, Ollama, Prompt Engineering, LLM Agent Workflows (Developed with AI-assisted workflows)

DevOps, Cloud & Systems

Docker, Git, GitHub Actions (CI/CD), Microsoft Azure, Linux (Ubuntu, Kali Linux), System Hardening, Network Fundamentals

Databases & Storage

SQLite, LocalStorage, SQL Database Objects

🏆 CERTIFICATIONS & HONORS

Microsoft Applied Skills Credential: Cloud Security & Monitoring Tasks

Foundations of Cybersecurity,

Google / Coursera

93.85%

Practical Cybersecurity Training,

Ideoversity

Arfa Software Technology Park

Global Top 20% Ranker,

International Research Olympiad (IRO)

2026

Grade 2A Qualification,

Alibaba Cloud AI Hackathon Pakistan

2026

🎓 EDUCATION

University of Central Punjab (UCP), Bachelor of Science in Cyber Security (BS Cyber Security)

2026 – 2030 | Lahore

Expected

Punjab Group of Colleges (PGC), Intermediate in Computer Science (ICS - Physics)

2026 | Lahore

🔧 EXPERIENCE & LEADERSHIP

Technical Ambassador & Contributor, Microsoft Learn Student Ambassador (MLSA)

- Guided peer developers through Microsoft Azure cloud modules, security governance, and compliance pathways.
- Reached 560+ preferred visitors on contributor links and published structured technical walkthroughs.

Web Application Penetration Testing Intern (Cohort 02), IqraSec Academy

Selected for a virtual internship focusing on WAPT, vulnerability assessment, and security analysis.

Digital Transformation & Growth Specialist, Local Enterprises & Global Channels

- Deployed automated client feedback systems via Tally.so & webhooks and scaled international digital channels to 230K+ organic impressions in 7 days.

📁 PROJECTS (DEVELOPED WITH AI ASSISTANCE & LLM WORKFLOWS)

Auto-Incident Responder (Linux EDR & Active Defense Engine)

Engineered a Linux endpoint detection and active defense containment engine built with Python, FastAPI, Docker, and a WebSocket dashboard (Developed with the help of AI).

LocalBiz AI WhatsApp Agent

Engineered an open-source conversational business assistant utilizing FastAPI, Docker, and Meta WhatsApp Cloud API (Developed with the help of AI). Integrated Groq and Gemini models for ultra-low latency response generation and intelligent intent handling.

Bellas-Haripur Web Application

Developed a full-stack web application featuring a custom FastAPI backend along with clean HTML, CSS, and JavaScript front-end components.

RetailFlow-POS (Offline-First POS & Inventory System)

Architected an open-source, offline-first Point of Sale and inventory management application using vanilla JavaScript, HTML5, and LocalStorage.
